

Saafera – Bug & Phase 1 Feature Report

Structured from the handwritten QA notes supplied by the Saafera team.

1. Bugs & Corrections

ID	Area	Issue / Requirement	Priority
BUG-01	Places	Duplicate places appear multiple times; permanently closed places are also appearing.	HIGH
BUG-02	Maps/API	Google Maps/API issue: manually added places and API places are being mixed incorrectly; nearby/one-day-trip selection can be wrong.	HIGH
BUG-03	Place Photos	Google API places are not showing photos; add a reliable image solution.	MEDIUM
BUG-04	Trip Planner	Budget has no maximum limit. Add a sensible maximum (the note suggests ₹50,000 for the current planner).	MEDIUM
BUG-05	Trip Planner	When food-per-person is blank/zero, keep the value explicitly at ₹0 so calculations remain clear.	LOW
BUG-06	Vehicles	Bike/Car/Taxi icons are mismatched. Correct the icon mapping for each vehicle type.	MEDIUM
BUG-07	Nearby Places	Selecting a destination such as Mysore should return genuinely nearby/relevant places, not unrelated or merely similar places.	HIGH
BUG-08	Budget Plan	Incorrect/unwanted places can appear in the final budget plan. Add a clear Remove button for each place.	MEDIUM
BUG-09	By State	Verify state → district → place mapping. Avoid duplicate/similarly named locations being assigned to the wrong district.	HIGH
BUG-10	Festivals	Allow users/community members to suggest or add locally organized festivals and events.	MEDIUM
BUG-11	Community	No clear Reels icon/entry point in the Community section.	LOW
BUG-12	Community	Post images are too small; display images larger and clearer.	MEDIUM
BUG-13	Community	Add a personal-message option so a user can message the person who created a post.	MEDIUM
BUG-14	Trip Cost	Trip-cost screen can show the wrong location/context after places are added. Verify selected places are reflected correctly.	HIGH
BUG-15	One-Day Trips	Distance filters such as 30/60/100/150 km do not return the expected places. Fix distance-based filtering.	HIGH
BUG-16	Popular Trips	For the initial phase, remove Popular Trips and use the distance (KM) option instead.	MEDIUM

2. Phase 1 Feature Requirements

ID	Feature	Description
FEAT-01	Group Trip Generator	Add a + button in the main planning area for creating a group trip and entering the group-trip flow.
FEAT-02	Place Attachments	Allow useful trip documents such as bus tickets to be attached to a place/trip and displayed when the place is opened.
FEAT-03	Place Photos	Improve place imagery so API places do not appear without photos, using sources and permissions that Saafera can legally use.
FEAT-04	Place Reviews	Allow users to review/rate places inside Saafera.

3. Recommended Fix Order

- **Priority 1:** Fix place data correctness — duplicates, closed places, wrong nearby places, district mapping, API/manual mixing, and distance filtering.
- **Priority 2:** Fix trip calculations and controls — cost context, budget limit, food default, vehicle icons, and remove-place control.
- **Priority 3:** Improve Community — larger images, Reels access, direct messaging, and reviews.
- **Priority 4:** Add the planned Phase 1 features — group trips, attachments, improved photos, and reviews.

4. QA Acceptance Checklist

- 1. No duplicate place appears in the same result set.
- 2. Closed places follow Saafera's defined visibility rule.
- 3. Nearby places are geographically relevant.
- 4. Distance filters return places inside the selected radius.
- 5. Trip cost updates correctly when places are added or removed.
- 6. Vehicle icons match Bike, Car and Taxi selections.
- 7. Budget input is validated and capped at the configured maximum.
- 8. Community images are readable and appropriately sized.
- 9. Reels and messaging are accessible where enabled.
- 10. New Phase 1 features work on mobile and desktop.

Note: This report converts the handwritten notes into a structured development/QA backlog. Exact API behavior, limits, and implementation details should be confirmed by the development team.
